Logit Systems starts activities in Benelux, launches Logit 4SEE™ and takes over activities of Sequoyah NV

Geel, Belgium, 27th December 2010

During fall of 2010, Norwegian based Logit Systems AS has set up a subsidiary Logit Systems BVBA in Belgium as part of the launch of the Logit 4SEE™ service.

Logit 4SEE™ delivers a global, proactive and multi-modal freight planning and visibility service that offers full visibility and supply chain event management. Logit 4SEE™ bundles logistics information, application functionality and a logistics community concept into an attractive, easy-to-use and web-based solution that is distributed to end users and platform operators on a transaction basis.

Logit Systems BVBA will focus on the further development and rollout of the Logit 4SEE™ service, based on the technology platform developed by Logit Systems for the past 10 years.

As part of this step, Logit Systems has taken over activities of Sequoyah NV. The integration of Sequoyah's activities will strengthen Logit Systems' capabilities for consulting and implementing Logit 4SEE™ services.

Frank Knoors, founder and managing director of Sequoyah, will lead Logit Systems BVBA. He assumes responsibility for the commercial management of the group. He is also a shareholder and Board member of Logit Systems.

Please contact Frank Knoors (contact details above) for more information.

Logit Systems is a provider of ICT solutions for supply chain execution and commercial ship management, with companies in Norway, Belgium and India. Logit Systems has been at the forefront of Internet based solutions for freight and fleet management.

Logit 4SEE™ is a SaaS (Software as a Service) that provides a Single Access Point to end-to-end transport options & status. It provides true visibility that proactively shows how problems can be mitigated: Aggregating data to cover blind spots in the chain, predicting delivery time, reducing impact by proposing dynamic rescheduling and/or rerouting - a single service to plan & follow up logistics chains.

Sequoyah has been providing consultancy services in e-commerce and business process engineering as from 1993, with a focus on advanced Internet applications and business models for multi-modal transportation. Two notable examples are work done on new models for collaboration & data exchange in e-Logistics (Freightwise) and supply chain security (Smart-CM and the Flemish e-Logistics Platform).
